

## Konzept task 9

### HTML:

name	vorname	mut	insert
			<div style="display: flex; justify-content: space-around;"> <span>refresh</span> <span>filter</span> </div> <p style="text-align: center;">id = "filter"</p>
			<p style="text-align: center;">-&gt; id = "daten"</p>

### DBClient.ts:

## Server.ts

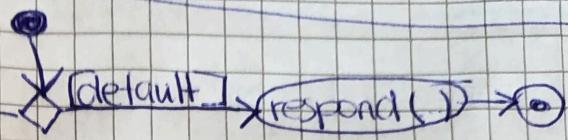

handleRequest

[case="filter"]

let find: number = query["suche"]

Database.find(matrikel = number)

respond(response, "found")

muss ich hier die gefundenen Studenten zwischenspeichern?

## Database.ts

Datenbank muss glaube ich nicht verändert werden
